

Pioneer A2100 Air System

The Pioneer A2100 air powered tarping system is ideal for construction, excavation, paving and landscaping applications. This affordably priced system works on truck bodies up to 22'. It provides smooth, synchronized movement and can be operated easily inside the truck cab.

Smooth Operation

- Pivot arms powered by twin air cylinders mounted under truck body
- Two double-acting air cylinders move simultaneously on a 1¼" solid steel shaft, providing synchronized movement
- In-cab air valve control provides easy operation with no springs, motors or wires
- 3" spring-loaded roller ensures a smooth operation, keeping the tarp taut in the covered position and as the tarp returns

Durability

- Optional tarp saver bar prevents tarp billowing and premature wear and tear

Secure Load Containment

- Positive hold down pressure on the arms in the covered/uncovered position contains the load and prevents damage caused by bouncing tarp arms
- Optional air-driven, patented tarp saver bar holds tarp tightly over load to securely contain loads

Options

- Aluminum arms (steel arms are standard)
